

# Framework for Inferring Leadership Dynamics of Complex Movement from Time Series

---

CHAINARONG AMORNBUNCHORNVEJ AND TANYA BERGER-WOLF

DEPARTMENT OF COMPUTER SCIENCE, UNIVERSITY OF ILLINOIS AT CHICAGO

# Get to know leadership

---

## Definition

- Process: Leaders influence the group to achieve collective goals

## Types of leaders

- Leaders by title (CEO etc.)
- **Emerging leaders (by behaviors)**

## Fields of study

- Managing leadership (human)
- **Leadership inference from data**

## Emerging leadership types:

- Explicit leadership (leaders influence a group)
- Implicit leadership (leaders unknown to a group)

# Leadership of coordination

## Definitions

- Coordination: collective behaviors (patterns)
- Leaders: Individuals initiate collective patterns that everyone follows

Why we study leadership?: Leadership plays a key role in

- Group Decision Making Process (human and social animals)
- Collective events (e.g. Stock market)

# Tracking positions by GPS devices

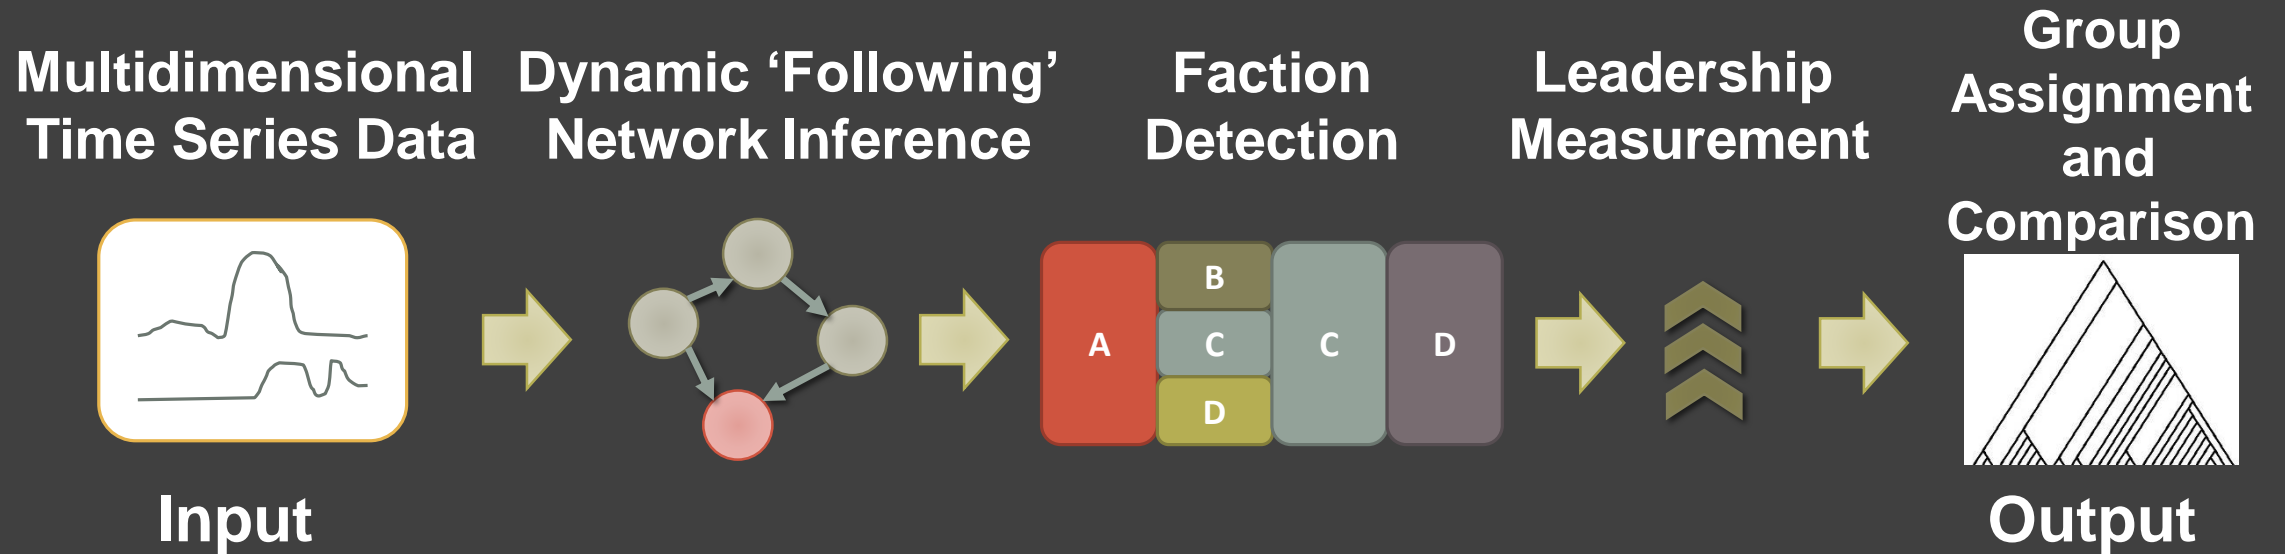

## Challenges

- Who are leaders and how can we infer them?
- How can we infer multiple coordinated activities that can happen concurrently?
- How can we infer merging and splitting events of movement

# Method

---

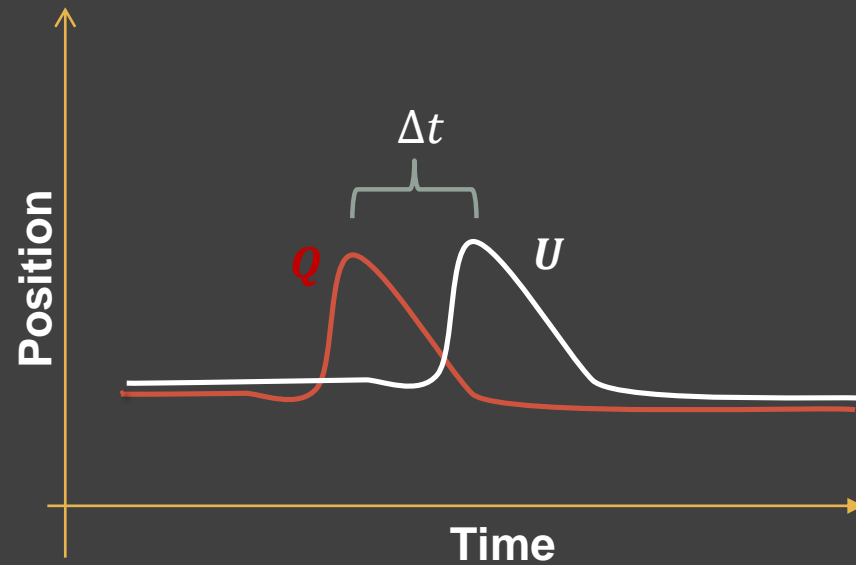

# High-level mFLICA\* framework procedure

\*The Framework of Multiple-Faction Leadership Inference in Coordinated Activity

# Following Network

Dynamic 'Following'  
Network Inference

Following Network

Nodes: individuals

Edges: following relations

Time Series of U follows Q

The optimal warping  
path of DTW

# Coordination

Dynamic 'Following'  
Network Inference

Following Network

# Faction definition

**Definition 8 (Faction)** Given a set of time series  $\mathcal{U}$ , a subset  $F \subseteq \mathcal{U}$  at time  $t$  is maximally coordinated, if  $F$  is coordinated and there is no other coordinated set  $F' \subseteq \mathcal{U}$  where  $F \subset F'$ .

We call such maximally coordinated  $F$  a faction at time  $t$ .

Following network

**Definition 9 (Faction interval)** The coordination interval of a faction  $F$  or a faction interval is the maximal consecutive time interval  $[t_1, t_2]$  such that  $F$  is coordinated for every  $t \in [t_1, t_2]$ .

# Faction Initiator Inference Problem

---

---

**Problem 2: FACTION INITIATOR INFERENCE PROBLEM**

---

**Input** : Set  $\mathcal{U} = \{U_1, \dots, U_n\}$  of  $m$ -dimensional time series

**Output:** A set of factions  $\mathcal{F} = \{F_1, \dots, F_k\}$ , a set of coordinated intervals

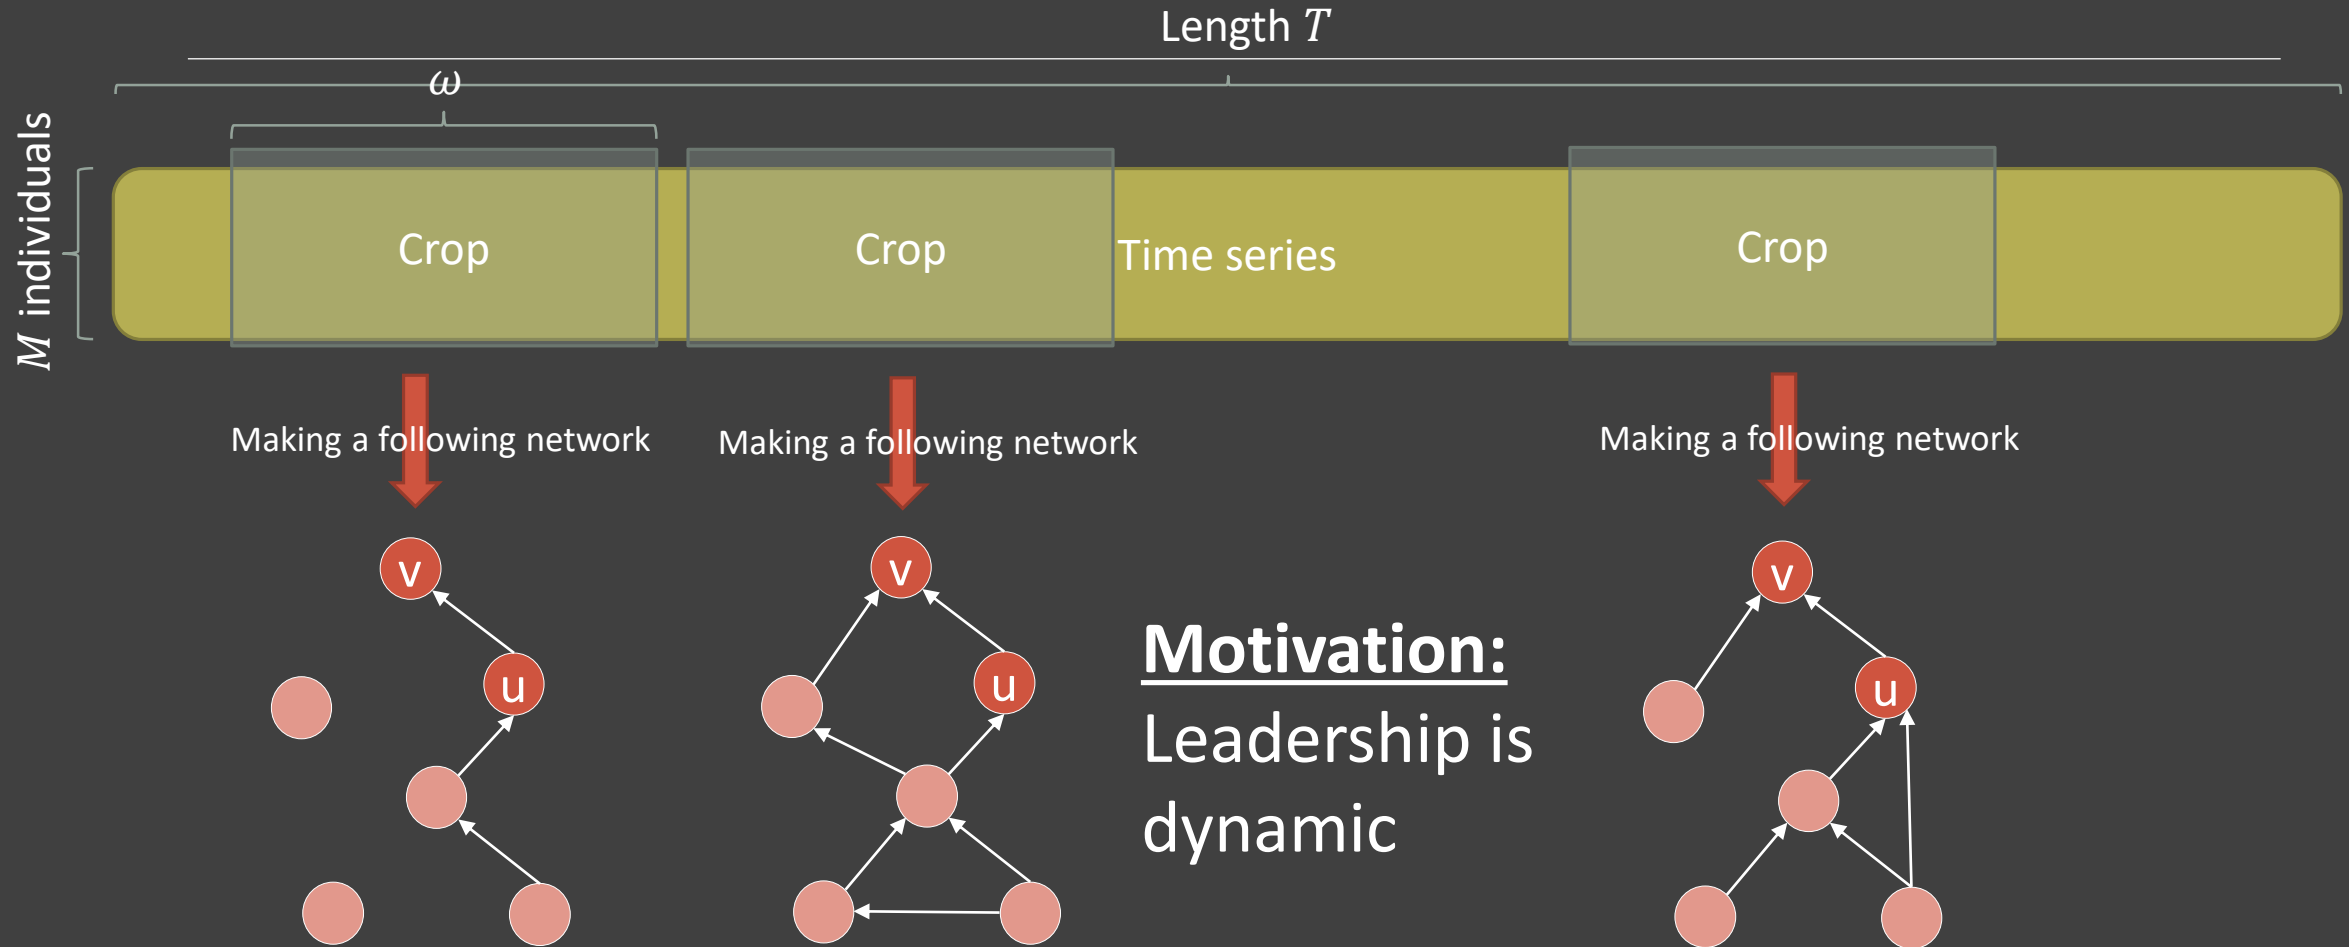

$\mathcal{T} = \{[t_1^1, t_2^1], \dots, [t_1^k, t_2^k]\}$ , and the set of initiator time series  $\mathcal{L} = \{L_1, \dots, L_k\}$

where  $L_i$  initiated the coordination interval  $[t_1^i, t_2^i]$  of the faction  $F_i$

---

# Dynamic following network

Dynamic 'Following'  
Network Inference

## Faction Detection in Dynamic following network

Find initiators in following network

- Initiator  $L$ : zero outgoing degree

Find Members of each faction: **BFS**

- Member of faction has a path reaches to  $L$

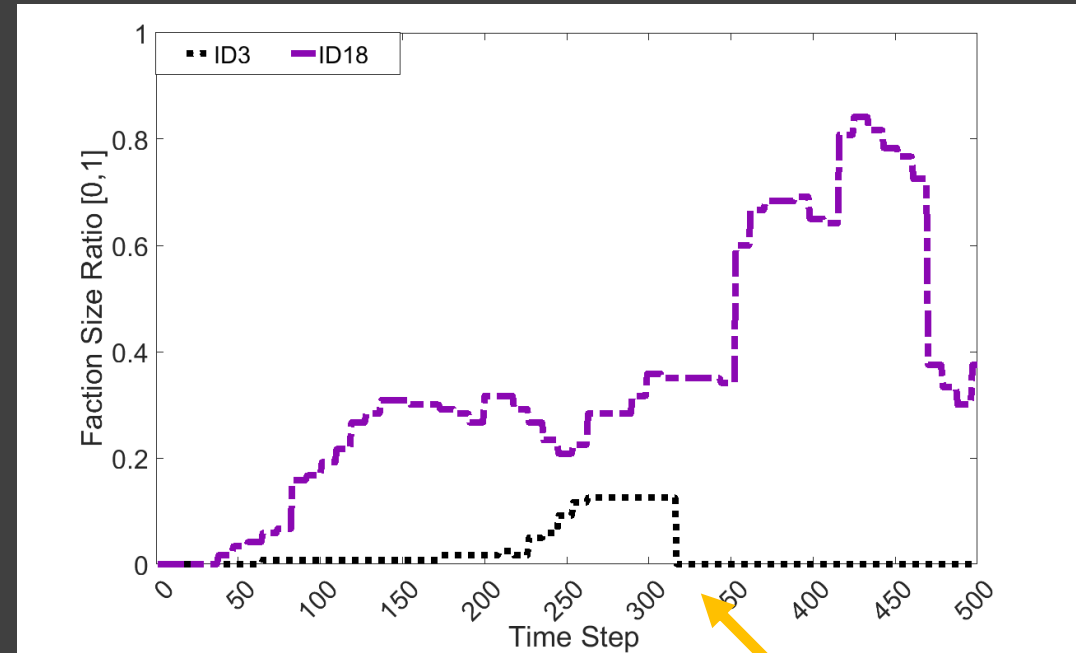

**Definition 11 (Relaxed faction interval)** Let  $\mathcal{U}$  be a set of time series, the time interval  $[t_1, t_2]$  is a faction interval of initiator  $L$  if for all  $t \in [t_1, t_2]$ , there exists a faction  $F_t$  such that  $F_t$  has  $L$  as its initiator and  $|F_t| > 1$ .

# Results

---

# Case study: merging event of baboon troops.

$$\text{Faction size ratio} = \frac{|E_f|}{\binom{|V|}{2}}$$

320th time step

# Faction prediction result: simulation data

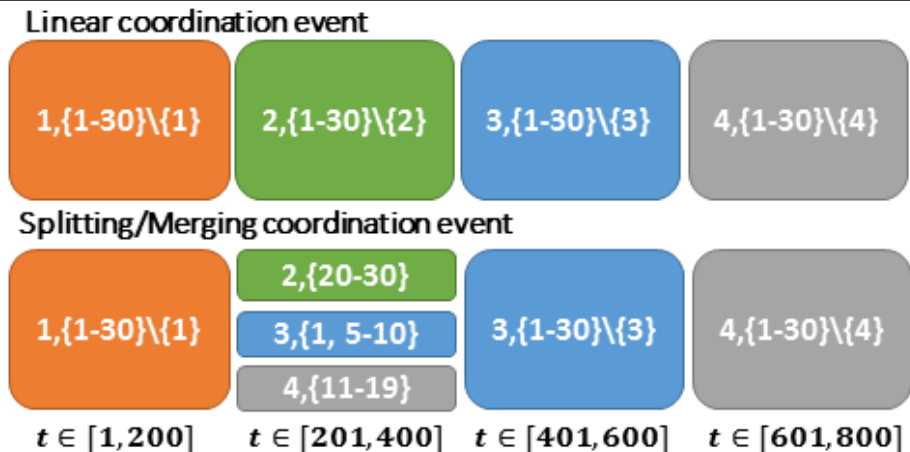

Factions and Leaders identification on simulation models

Dataset	Leadership F1-score		Assignment Acc.	
	mFLICA	FLOCK	mFLICA	FLOCK
DM-L	<b>0.94</b>	0.92	<b>0.89</b>	0.86
DM-MS	<b>0.94</b>	0.91	<b>0.86</b>	0.84

# Faction prediction result: school of fish

A school of fish inference median accuracy over 24 trails

Method	Trained fish factions	Trained fish leaders
	factions	leaders
mFLICA	0.90	0.88
FLOCK	0.37	0.27

# Summary

---

We formalized **Faction Initiator Inference Problem**

Propose Average Coordination Measure: degree of coordination (time window inference)

- See the detail at my poster!

Propose Complex Leadership inference Framework in Time Series: mFLICA

1. Detecting multiple factions events
2. Identifying initiators of each faction
3. Infer time window that maximizes the average coordination measure.

Our results show that,

- Leadership identification: mFLICA can infer all types of complicated leadership process: **Linear** and **Splitting/Merging** Coordination Events .
- mFLICA can infer trained fish accurately.
- mFLICA can detect the group merging event of the baboon troop
